

# GAMES FOR THE ATOM FROM ACORN SOFTWARE

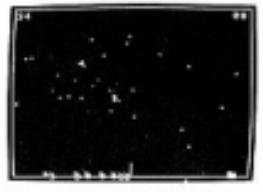

## ASTEROIDS

Your spaceship is encountering an asteroid storm; you must shoot the asteroids before they collide with your ship; but beware that large asteroids will break into smaller asteroids when hit. As in the popular pub version the game keeps a ladder of the ten best scores, together with the names of the scorers. Program 4K, graphics 6K.

## SPACE ATTACK

Earth is being invaded by hostile aliens; armed with a laser-gun you must repel the invasions and avoid being hit by the gunner ships. If you fail, the mother ship lands and the invaders take over. The game becomes progressively harder with each subsequent invasion; if you survive ten invasions the earth is saved! Program 4K, graphics 6K.

## DOGFIGHT

A two-player game in which each player controls a plane from the keyboard, and tries to shoot down the opponent without crashing into the stars. Each player has control of the direction of flight, a fire button, and an accelerate control. Program 4K, graphics 6K.

## LUNAR LANDER

Land a spacecraft on a lunar crater; instrument panel gives readout of altitude, velocity, fuel remaining, and drift velocity, and provides control over thrust and drift. Program 1K, graphics 5K.

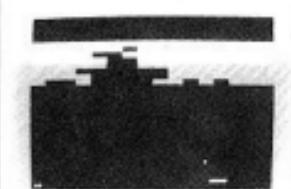

## STAR TREK

A full implementation of the now classic computer game in which you must rid the universe of Klingons. With short and long-range scans, galactic map, phasers, photon torpedoes, shields, etc. Program 5K, graphics 1K.

## ZOMBIE

Your plane has gone out of control and you are plummeting into the unknown. You land on Zombie Island; your only hope of survival is to lure all the zombies into potholes. In desperation you can try a jump into hyper-space! Program 3K, graphics 1K.

## BREAKOUT

Breakout is a version of the popular pub game in which you score points for knocking bricks from a wall. Balls can get trapped behind the walls and knock out a great many bricks. To add to the skill the balls undergo two changes of angle and speed, and when hitting a ball two angles of reflection are possible. The game keeps a record of the highest score, Program 3K, graphics 1-2K.

Not illustrated

RAT TRAP

Move your rat without colliding with the trails left by either rat, and entangle your opponent before he entangles you! With high-speed action-replay feature, Program 5K graphics 5K-

RATTLESNAKES

**Battleships** is played on two Atoms linked by the cassette interface; any pre-agreed arrangement of ships is possible, and the game automatically reports on which ships have been hit. Program 1K, graphics 3K.

MASTERMIND

Guess the computer's code before the computer guesses yours; a test of logical deduction and reasoning. Program 3K, graphics 1K.

## BLACK BOX

Deduce the positions of four invisible objects in the Black Box by firing rays at them and observing how they are reflected or absorbed. Program 4K, maxtime 145.

SUE HUNT

You are in command of a destroyer tracking a submarine; knowing the submarine's course and position you must choose your course and speed to catch it. Program 1K, graphics 1K, needs a floating point.

SOFT VDL

The soft VDU handler acts exactly like the normal ATOM VDU, but plots the characters on the high-resolution graphics screen, using a character-set definition held in RAM. This program gives several advantages over the standard ATOM VDU:

1. Text may be mixed with high-resolution graphics; for example, graphs may be labelled with the full character set.
  2. Since the character-set definition is held in RAM, the characters can be redefined at will, and foreign characters can be accommodated.
  3. The VDU can generate a total of 128 different characters, as opposed to the ATOM's 64.
  4. The keyboard handler incorporates two-key rollover, thus making touch-typing easier.

The software VDU handler automatically moves the default text-space from #2800 to #2E00 to make room for the TNSK program. Two versions of the program are supplied, giving either black characters on a white screen, or white letters on a black screen. Also included is an interactive program DESIGN which enables new characters to be designed and added to the character set.

Prices excluding VAT

Games Pack 1: ASTEROIDS, SUB HUNT, BREAKOUT . . .	£10.00
Games Pack 2: DOGFIGHT, MASTERMIND, ZOMBIE . . .	£10.00
Games Pack 3: RAT TRAP, LUNAR LANDER, BATTLESHIPS . . .	£10.00
Games Pack 4: STAR TREK, BLACK BOX, SPACE ATTACK . . .	£10.00
Soft VDU pack: VDU-W, VDU-B, DESIGN . . .	£10.00

Each cassette includes a test sequence, and comes complete with a full instruction booklet giving details of how to load, run, and if required, modify the programs.
